RED PANDA

Red Panda doesn't live in Caucasia.

It lives in hot sunny Asia.

And Red panda is called Fire fox.

It is so small that can climb into a card box.

It is the size of a cat,

But is not that.

Red Panda has a long red tail,

To balance on trees and not to fail.

There is fur on its feet,

From slipping it must keep.

Sharp claws grip the trees

Somewhere beneath.

It also munches on fruit and grass

Sitting in its room perhaps.

Its favorite food is leaves bamboo

Which it likes eating in a ragout.

Red Panda may twitter, squeak or snort

When they each other support.

Pay attention!

Red Panda's in a Great danger!

Cause its fur is very valuable to a stranger.

A Hunter kills animals for the pleasure,

He doesn't think a lot of about the measure.

Now Red Pandas are less than 2 500 left

Remember you are responsible for keeping that!
